PRINCETON

1776-7

Foreword

IN preparing this new 1936 edition of the Princeton Handbook, we have tried to keep our prices approximately the same as last year although many items are becoming scarce because of reduced propagation through the depression, and there is every indication that prices are on the upgrade.

The stock is well grown and carefully handled with a minimum of exposure so as to insure the best planting results. All orders are freshly dug and the plants consequently are not injured by storage.

We wish to emphasize the fact that the material offered is Princeton grown in our own nursery consisting of over 1,000 acres. We mention this because very few firms can offer such a large assortment of their own grown material or stock which has been so carefully maintained in good condition.

Also, we call your attention to our ability to quote on large complete lists because of the comprehensiveness of our inventory. We specialize in furnishing materials for large parks and similar projects.

Conditions of Sale

PRICES, ETC.

The prices named in this list cancel all previous lists. They are based on current market conditions and are subject to change without notice. Increases may be made to include any Federal or State taxes levied on sales or any increase in the cost of labor or material caused by Federal or State legislation or regulation.

TERMS AND DISCOUNTS

TERMS: 2 per cent discount for payment in 10 days from date of invoice. Accounts due first of second month following date of invoice. These terms are offered to those with established credit; otherwise cash or satisfactory references are required.

Quantity Discounts from prices listed herein.

\$ 50.00 to \$100.00...2%	\$300.00 to \$500.00...5%
100.00 to 200.00...3%	500.00 to 800.00...7%
200.00 to 300.00...4%	800.00 and up10%

These discounts will not apply on invoices not paid when due. Interest at 6 per cent per annum will be charged on all delinquent accounts.

C.O.D. Shipments: In order to insure acceptance, orders for C.O.D. shipment should be accompanied by one-third of the amount of the order.

PRICES ARE F.O.B. KINGSTON, N.J.

We reserve the right to reject orders which call for unusual items only. We expect that a reasonable quantity of the commoner items will be included in your order. This compensates in part for the high cost of producing varieties that others do not grow because they are too difficult or unprofitable.

We recommend that all varieties marked with an asterisk (*) be lifted with a ball of earth and burlapped. Experience has shown that the loss in these plants, which is otherwise high, is reduced to a minimum if handled in this way.

Should any article be desired balled and burlapped, which is not so designated in the catalogue, there will be the following scale of charges.

2-3', 15c 3-4', 20c 4-5', 30c 5-6', 40c 6-8', 60c 8-10', 75c

Larger sizes would be charged in proportion. In all instances where varieties are marked B. & B. after the item, these charges are included in the printed price.

Reservations of specimen plants. For an additional 25% of the cost of each item, customers will be permitted to select and reserve specimen plants in the nursery rows.

GUARANTEE OF GENUINENESS:

We will send out healthy, thrifty stock, true to name. If any nursery stock proves untrue to description or variety name under which it is sold, we hold ourselves in readiness, on proper proof, to replace free of charge such stock that may prove untrue to description or name, or refund the original amount paid. We shall in no case be liable for any sum greater than the amount originally received for said stock.

CLAIMS

All sales are made with the understanding that we shall not be liable in event of crop loss, or of damage from other causes over which we have no control.

We will gladly correct any errors, but we cannot entertain any claims that are not made within ten days after receipt of the stock or are made after the stock has once been accepted. Claims should be made promptly in writing on receipt of stock.

Plants become your property upon delivery to transportation company and we cannot be responsible for loss, damage, or delay in transit.

All orders booked are based on the distinct understanding that the purchaser agrees to the condition of sales as stated above.

Notes in Explanation of Catalogue

The figures following each variety indicate in feet the approximate height of that plant in maturity. Ample allowance has been made for the many physical factors that tend to modify the growth of plants in cultivation.

The botanical and common names are taken from "Standardized Plant Names," which is the accepted authority on plant nomenclature in the horticultural industry.

Our standard of grading all plants is based on a formula which has been adopted by the American Association of Nurserymen.

Quantities of 5, 25, and 250 will be sold at the ten, hundred, and thousand rates respectively.

How to Reach Princeton Nurseries by Auto or Train

We are located midway between New York and Philadelphia. Both the Lincoln Highway and the new Super-Highway (Route 26) pass our nurseries.

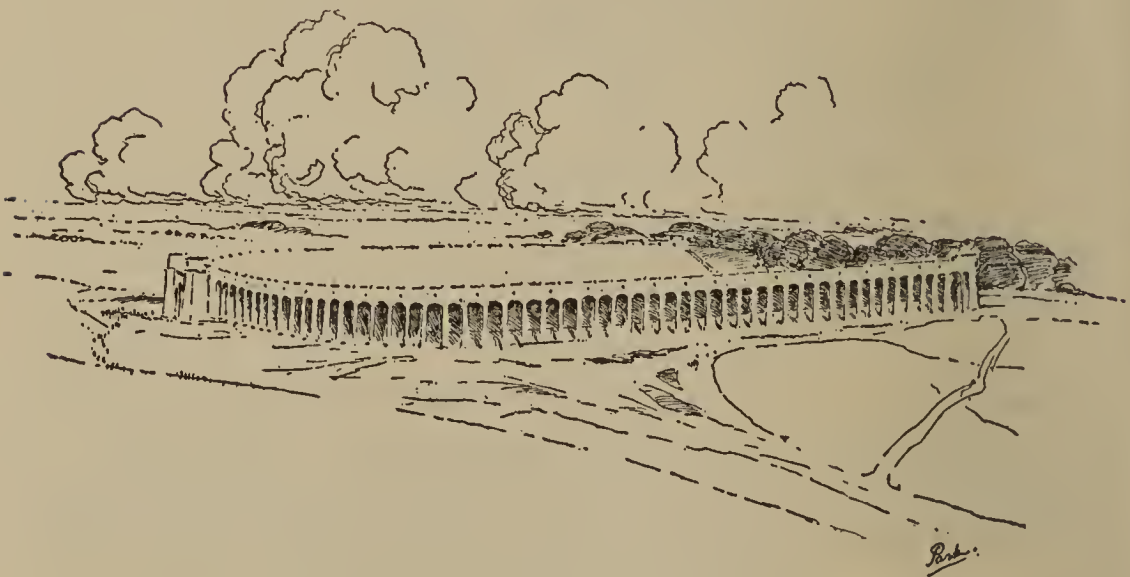

The office of Princeton Nurseries is located on Lake Road, in the town of Kingston, New Jersey.

The nearest railroad stations are at Princeton and Princeton Junction. Phone Princeton 1776 or 1777 and we will be glad to come and meet you at either place.

The New York-Washington planes pass over our nursery hourly. When travelling by airplane, watch out for the interesting block arrangement from the air.

We would call your attention to the fact that we have one of the largest nurseries in the country with over 1000 acres of nursery stock. We are growing between 1100-1200 varieties of hardy woody ornamentals.

A cordial invitation is hereby given to visit our nursery at any time.

BERBERIS

NEW HARDY EVERGREEN TYPES

We have a good assortment of these new varieties which are very attractive in both dark green, holly-like foliage and showy flowers. We consider this class of stock one of the most valuable additions to the broad-leaved evergreens. As a class nearly all have large thorns, spined leaves, and color beautifully in the winter months. Under favorable conditions most of them will attain a height of about six feet.

NURSERY GROWN OAKS

Our Specialty

The following list of Oaks is (we are told) one of the finest lots grown in America. For years we have been painstakingly building up a select lot of shade trees and have been convinced that Oaks would be finally recognized as one of the best shade tree groups. The increased popularity and demand have justified our conviction.

Our Oaks are straight stemmed with good heads and well defined leaders and have been transplanted several times so that the root systems are of the best.

They are especially adapted to highway and park planting and are available in quantity. We have over 100,000 including all sizes.

We handle our trees carefully, avoid exposure and take every precaution to insure safe transplanting.

**FRENCH LILACS—NAMED VARIETIES
ALL ON OWN ROOTS**

These are all grown from cuttings and are on their OWN ROOTS, which is the best method of propagation. The resulting plant is more permanent than the grafted stock commonly offered. We specialize in named Lilacs and are able to offer these superior grown plants at prices that compare favorably with inferior grafted stock. These named Lilacs generally grow from 6 to 12 ft. in height, depending on the variety and locality.

Planting Notes on Native Plant Materials

MANY of our friends have told us that they have used the Princeton Nurseries catalogue as a planting guide and text-book. We accept this as a great compliment to have published a trade handbook which may be serving a useful purpose.

One of the yearly features of our catalogue has been the space allotted for Special Planting Lists. These planting guides have materialized as the demand has been created for a more accurate knowledge of the use of plant materials.

In the past twenty years, due in part to extensive park developments, we have seen an increasing use of native American plant materials. Princeton Nurseries have realized this growing demand and are now able to offer in great quantities and in various sizes, over 150 varieties of hardy native woody trees, shrubs and vines.

To better appreciate the more intelligent use of native types and avoid unnatural plantings, it is quite desirable to group these native types according to the way they associate with one another in their natural environment. The various plant groups are influenced by definite environmental factors. The native plant is more or less confined to the most suitable location by its ability to adapt itself. Conditions are ever changing in the life of plants growing in the open pasture or in the virgin forest.

It might be safely stated that all plantings of native material are more harmonious and congenial if plant types are used together which are found associated together in nature.

In presenting the following types, it is well realized that if space would permit, it would be better to sub-divide each type into smaller groups. We are placing them under four general headings as follows:

- A—The Field and Pasture Type.
- B—The Lowland and Swamp Type.
- C—The Forest Type.
- D—The Seaside Type.

A

The Field and Pasture Type

TREES

Betula populifolia	Juniperus virginiana
